Fast, Secure Backup To The Cloud

Vault365 and Veeam® Cloud Connect technology makes it easy to get backups and replicas off-site to our Backup as a Service (BaaS) locations without the cost and complexity of managing a second infrastructure.

It's as easy as contacting one of our backup experts and pointing backup or replica jobs to the cloud with a few simple clicks. There's no separate console, and data is fully encrypted at every step. Backups are as safe and confidential as they would be in a dedicated off-site repository, so that data of ALL types is completely protected and easy to recover.

Enterprise-Grade Backup And Recovery

Vault365, together with Veeam's Cloud Connect technology, ensures your data is always available and fully protected, no matter where it resides – on servers, workstations or in the cloud. Protect yourself with simple, complete backup and recovery without sacrificing enterprise-caliber features and SLAs.

BAAS FOR THE DATA CENTER

Seamlessly execute a hybrid cloud strategy by storing backups off site for retention, secure recovery and more.

BAAS FOR ENDPOINTS

Keep your on-the-go workforce and dispersed infrastructure fully protected with backup directly to the cloud.

DRAAS FOR RESILIENCY

Achieve full- or partial-site failover to a remote DR site from anywhere with a few clicks through a secure web portal.
