DRaaS Benefits

Not every organisation can build their own datacentre or hire a full-time DR specialist. Even for those who can, there are benefits of replacing the cost of secondary sites with predictable monthly expense for a specialised service. For many organisations, DRaaS can be an ideal solution. The benefits of DRaaS include:

- **Flexible deployment** - Choose a service provider that makes most sense for your organisation - from self-managed to partially or fully managed.
- **Disaster recovery customised for your business** - Fully managed service provides complete end-to-end design, implementation, and management for your DR environment.
- **Remote copies for additional security** - A resilient, remote, and cloud-based location for disaster recovery protects you against any geographic disruptions.
- **Additional resources** - Save time with disaster recovery specialists managing your solution.
- **Predictable billing** - Consumption based pricing, only pay for what you need.

Vault365: Reliable And Powerful Disaster Recovery

Vault365 deliver comprehensive cloud-based data protection solutions to the world's most secure organisations. With our Cloud Backup, Backup as a Service (BaaS) and Disaster Recovery as a Service (DRaaS) you get the most cost-effective data protection for your organisation. You only pay for what you use, with no charges for egress data access, while also eliminating the complexities of storage tiers. Our superior data management via our Service Provider Console offer single pane of glass visibility, ensuring efficient control and monitoring of your data.

DRaaS FOR RESILIENCY

Achieve full- or partial-site failover to a remote DR site from anywhere with a few clicks through a secure web portal.

MINIMISE DOWNTIME

Quickly resume operations from a single file to an entire datacenter.

ALWAYS ON AVAILABILITY

Be prepared for disruptions and natural disasters with an expert provider.
